ABOUT ME

Product-driven engineer with experience building enterprise SaaS platforms at ServiceNow and Amazon. Partnered across Product, Design, and Engineering to translate customer insights into scalable platform capabilities. Passionate about AI-native products that simplify complex workflows.

CASE STUDIES

- **Daily Pulse** 🔗 — **Making CWM the First App Users Open Every Morning**
Proposed a product strategy to consolidate high-priority work across enterprise systems into a unified daily planning experience.
- **SPM Grid Strategy** 🔗 — **Prioritizing Platform Investments with Reach × Leverage**
Applied a prioritization framework to recommend high-leverage platform investments balancing customer value, engineering effort, and scalability.
- **Nykaa Product Teardown** 🔗 — **Reducing choice overload through intent-based discovery**
Proposed an intent-driven discovery experience to simplify product selection and improve shopping journeys.

WORK EXPERIENCE

Software Engineer, ServiceNow 02/2023 – Present | Bengaluru

- Built reusable planning components—including data grid, Gantt, and column configuration—used by 6+ SPM teams, improving consistency and enabling faster delivery of enterprise planning experiences.
- Synthesised insights from 50+ customer escalations, revealing that most customer issues stemmed from configuration complexity, release drift, and expectation gaps rather than missing functionality, influencing product prioritisation.
- Partnered with Product, Design, and Engineering to define and deliver capabilities across CWM, balancing customer needs, technical constraints, and platform consistency to guide implementation decisions.
- Distinguished genuine product defects from adoption and configuration issues by analysing performance, accessibility, security, functional, and regression trends, enabling engineering teams to focus on systemic improvements over reactive fixes.
- Contributed to AIUX platform adoption of the doc UI interface and improved release reliability through automation.

Software Development Engineer, Amazon 05/2022 – 02/2023 | Gurgaon

- Developed capabilities for Amazon Seller Central that integrated identity verification with ML-driven risk assessment, helping automate seller onboarding decisions while balancing fraud prevention and customer experience.
- Improved seller onboarding by optimizing page rendering and standardizing security requirements, reducing implementation complexity and enhancing the onboarding experience.

Programmer, Infosys 01/2021 – 05/2022 | Pune

- Automated data transformations for the enterprise data, improving data loading performance by 13% and enabling analysts to work from a consistent, trusted dataset.

SKILLS

Product & Design: Product Discovery, Customer Insight Synthesis, Prioritization, User Journey Mapping, Enterprise UX, Interaction Design, Information Architecture

Execution: Agile (Scrum), Backlog Grooming, Sprint Planning, Cross-functional Collaboration, Release Management

Technical: Snow Platform, JavaScript, React, SQL, API Design, Component Architecture, AI-assisted Development

EDUCATION

BE CSE, UIET, Panjab University
CGPA - 8.42

2016 – 2020 | Chandigarh
